Ok, just giving a status update on everything... I've been trying to get the new data for Ramsey county set up. I actually got `geopandas` installed correctly (which is no mean feat...).

Does any of y'all know where we need to download the `Hennepin_County_Racial_Covenants_Table.csv` from? I've tried using both the final `mortgage_covenant_data.csv` from D2L (which wasn't the right idea, I know) and downloading the UMN data from <https://github.com/UMNLibraries/mp-us-racial-covenants/blob/main/mn-ramsey-county/covenants-mn-ramsey-county.csv>...

The error I've been getting just FYI:

```
Traceback (most recent call last):
  File "/home/imo2d/DATA6550-Housing-Bias/Code/Osborne/housing-data-student-notebook.py", line 374, in <module>
    covenant_slim = covenant[['FID', 'Racial_Res', 'Date_Deed', 'X', 'Y']]
  File "/projects/imo2d/lib/python3.9/site-packages/pandas/core/frame.py", line 4108, in __getitem__
    indexer = self.columns._get_indexer_strict(key, "columns")[1]
  File "/projects/imo2d/lib/python3.9/site-packages/pandas/core/indexes/base.py", line 6200, in _get_indexer_strict
    self._raise_if_missing(keyarr, indexer, axis_name)
  File "/projects/imo2d/lib/python3.9/site-packages/pandas/core/indexes/base.py", line 6249, in _raise_if_missing
    raise KeyError(f"None of [{key}] are in the [{axis_name}]")
KeyError: "None of [Index(['FID', 'Racial_Res', 'Date_Deed', 'X', 'Y'], dtype='object')] are in the [columns]"
```

I'm not sure - Checking the discussion boards now.

PS: Oh... I see you already posted it there... :)

This is the response I got from ChatGPT to help divide the work load evenly:

Person 1: Data Bias Analysis & Historical Context
Investigate and document how historical discrimination affects modern housing data.
Analyze relationships between covenant density, property values, and neighborhood demographics.
Write the historical context and data bias analysis sections.

Person 2: Algorithmic Bias Analysis & Lending Patterns
Analyze mortgage lending data and identify potential biases in approval rates and terms.
Investigate proxy variables that may reinforce historical discrimination.
Write the algorithmic bias analysis section.

Person 3: Ramsey County Data Collection & Comparative Analysis

Gather and preprocess Ramsey County data.

Apply the same analysis methods as in Hennepin County.

Compare results and document key differences.

Write the county comparison section.

Person 4: Visualization & Report Compilation

Create all necessary visualizations (property values, lending disparities, demographic patterns).

Organize findings into a clear, structured report.

Prepare the PowerPoint slides.

Ensure everyone understands key insights in case they are chosen to present.

Preparation for Presentation

Each person should review all sections to be ready if called on.

Practice explaining key findings concisely.

Anticipate questions (e.g., "How does data bias differ from algorithmic bias?" or "What were the biggest challenges in extending the analysis to Ramsey County?")

Regarding with Dr. Wallin's last email, do we still want to do Ramsey County Data Collection & Comparative Analysis?

IMOsbo 4 days ago

Owner

...

No, I think we should probably just let it go. I've looked at doing the georeferencing like he was talking about, but I think it would end up being too much work...

What would y'all like me to work on instead? (Since I guess I worked myself out of a job before haha)

@IMOsbo I asked ChatGPT to redistribute the workload and it gave me this:

Person 1: Data Bias Analysis & Historical Context

Research and document historical housing discrimination (redlining, racial covenants, etc.).

Analyze how historical biases are embedded in modern data.

Examine relationships between covenant density and property values.

Contribute to the Data Bias section in the report.

Help prepare explanations for potential presentation questions related to data bias.

Person 2: Algorithmic Bias Analysis & Lending Patterns
Investigate modern mortgage approval patterns and lending disparities.
Identify potentially biased proxy variables (e.g., neighborhood characteristics influencing loan decisions).
Analyze differences in loan terms, approval rates, and risk assessment criteria.
Write the Algorithmic Bias section in the report.
Prepare insights for potential presentation questions on algorithmic bias.

Person 3: Data Exploration & Visualization
Perform initial dataset exploration (data summary, descriptive statistics, checking for missing values).
Create visualizations for key findings:
Property value differences based on covenant density.
Loan approval disparities.
Demographic and economic patterns.
Ensure visualizations effectively support the report's key claims.
Help with slide preparation for the presentation.

Person 4: Report Compilation & Presentation Preparation
Organize and compile all sections of the final report.
Ensure clear explanations of methodology and results.
Edit and format the report for readability and consistency.
Develop PowerPoint slides with key insights and visualizations.
Ensure everyone is familiar with the main talking points in case they are randomly chosen to present.

Person 1 and 2 have the same work as before. Do you want to be person 3 or 4?

IMOsbo 3 days ago

Owner ...

This looks good - thanks Hector! I'll be person 3 again.

Hi Guys,
I'm a bit behind on my stuff - will get to it later on this evening. Thanks

Feel free to edit any parts that I wrote in the paper. I tried my best and guessed what you did/are going to do in your code.

IMOsbo 1 hour ago

Owner ...

No, I think it looks good Hector - thank you for doing that! I can't write nearly as well as I usually can with this stupid brace haha...

I just wanted to give an update; I might not be finished by 10:00pm. It'll probably be closer to 10:30pm. I'll let you all know when I'm finished with the writing portion.

Sounds good - I will work some on the powerpoint for tomorrow and add to GIT.
