Meeting summary for Richard Hoehn's Zoom Meeting (03/12/2025)

Quick recap

The team discussed their ongoing project, including data issues, task division, and potential analysis approaches. They drew on their past experiences with data classes and agreed to leverage previous work while exploring new techniques for their current project. The team assigned tasks to each member, set a follow-up meeting time, and discussed the creation of a project document.

Next steps

- Isaiah to email the professor if no response is received on his discussion post by tomorrow regarding the missing covenant data.
- Isaiah to reach out to Chance to see if he figured out the data issue.
- Richard to start working on Person 1 tasks (analyzing data bias) on Friday evening.
- Karson to work on Person 2 tasks (analyzing mortgage data).
- Isaiah to work on Person 3 tasks (data visualization).
- Hector to work on Person 4 tasks (presentation preparation).
- Richard to send the Zoom link for the next meeting to the team.
- All team members to regroup on Tuesday, March 18th at 5:30 PM Central Time for a progress check.

Summary

Isaiah's Data Issues Discussion

Richard, Isaiah, and Karson discuss the weather and Richard's beach vacation. They then talk about a Train air conditioning company convention at Richard's hotel. The conversation shifts to Isaiah's discussion post and data issues for a project. Isaiah shares his screen to show that he successfully downloaded mortgage data but is having trouble finding the correct covenant data, possibly from the Mapping Prejudice Project. Richard attempts to help by sharing links, but the issue remains unresolved.

Project Work and Data Analysis

The team discussed their work on a project, with Isaiah planning to email someone for clarification on a data set issue. They also discussed dividing up the work, with Hector

suggesting using ChatGPT to help with the division. Richard mentioned he would be working on the project over the weekend. The team also discussed the potential for bias in their analysis, with Richard suggesting they could look at how race affects loan approval. They agreed to start with the easier aspects of the project and then move on to the more challenging parts.

Exploring Past Data Class Techniques

In the meeting, Richard, Isaiah, Hector, and Karson discussed their past experiences with data classes, particularly focusing on the 63, 20 class. They recalled working on classification modeling and regression analysis, and considered applying similar techniques to their current project. They also mentioned a data dive class they took, which involved analyzing Airbnb data. The team agreed to leverage their past work and explore the possibility of running simple decision tree and logistic regression models for their current project.

Task Division and Project Progress

In the meeting, Richard, Isaiah, Karson, and Hector discussed the division of tasks for their project. They agreed to assign tasks to each other, with Richard taking person one, Isaiah taking person three, and Karson and Hector taking the remaining tasks. They also decided to regroup on Tuesday at 5:30 PM to discuss their progress. Richard will send the meeting link and login details to the team. They also discussed the creation of a document for their project, which Isaiah confirmed was already in progress.
