

WEBVTT

1

00:04:18.490 --> 00:04:19.510

Richard Hoehn: Hey, guys.

2

00:04:19.829 --> 00:04:21.089

Isaiah: Hey? How are y'all doing.

3

00:04:21.450 --> 00:04:22.819

Karson Woods: Good? How about yourself?

4

00:04:23.100 --> 00:04:23.860

Isaiah: Good

5

00:04:27.010 --> 00:04:29.249

Isaiah: enjoying this nice weather that we have.

6

00:04:29.640 --> 00:04:31.120

Karson Woods: Oh, yeah, definitely.

7

00:04:36.980 --> 00:04:38.490

Isaiah: How's the beach, Richard?

8

00:04:38.490 --> 00:04:42.699

Richard Hoehn: Good good. You can see it's a little got a little color.

9

00:04:43.756 --> 00:04:45.169

Richard Hoehn: Oh, no.

10

00:04:45.848 --> 00:04:51.050

Richard Hoehn: yeah, but like I was pretty, I'm still pretty white, kind of like. See that? See the difference.

11

00:04:51.050 --> 00:04:51.700

Karson Woods: We'll have.

12

00:04:51.970 --> 00:04:52.660

Isaiah: No.

13

00:04:53.249 --> 00:05:01.500

Richard Hoehn: You know. Let me see, I'm gonna make sure meeting AI companions on good.

14

00:05:01.820 --> 00:05:05.949

Richard Hoehn: So so we should be recording this.

15

00:05:08.860 --> 00:05:15.180

Richard Hoehn: Yeah, yeah, there's a. It's a hotel it's kind of a big hotel. And

16

00:05:15.350 --> 00:05:21.310

Richard Hoehn: do you guys know the air conditioning company called Train Train.

17

00:05:21.310 --> 00:05:21.700

Isaiah: That's right.

18

00:05:22.090 --> 00:05:27.577

Richard Hoehn: Yeah, so they are. They are having their sales convention or so. So they're having a

19

00:05:28.060 --> 00:05:32.240

Richard Hoehn: a party tonight. You kind of where the pool area is, and

20

00:05:32.450 --> 00:05:36.210

Richard Hoehn: bunch of people in train uniforms and all that. It's kind of funny, you know.

21

00:05:36.700 --> 00:05:39.609

Isaiah: I wouldn't think that exists, but it does so.

22

00:05:40.710 --> 00:05:45.620

Richard Hoehn: Ton of air conditioning guys. Here, yeah.

23

00:05:45.850 --> 00:05:48.200

Isaiah: Well, at least, if something breaks down, they should be able to fix it.

24

00:05:48.200 --> 00:06:02.839

Richard Hoehn: Yeah, exactly. Yeah. Well, you know, Florida, I don't. I don't think it's much I don't think it's warmer at all than what do you guys have right now in Middle Tennessee, just 70 kind of thing 65 to 70.

25

00:06:03.130 --> 00:06:03.890

Isaiah: Oh, okay.

26

00:06:04.210 --> 00:06:06.950

Richard Hoehn: Same temperature, yeah.

27

00:06:07.300 --> 00:06:08.020

Isaiah: Nice.

28

00:06:11.686 --> 00:06:15.850

Richard Hoehn: Did you ever get a response on your discussion post?

29

00:06:16.613 --> 00:06:20.490

Isaiah: Didn't get a notification about it. Let me just check real quick.

30

00:06:20.740 --> 00:06:23.040

Isaiah: I'd be surprised if I did this quickly.

31

00:06:23.810 --> 00:06:25.100

Richard Hoehn: Did you?

32

00:06:25.370 --> 00:06:29.950

Richard Hoehn: I started reading again, and I tried to follow some of the links.

33

00:06:30.560 --> 00:06:33.200

Richard Hoehn: You know where where you download stuff.

34

00:06:33.720 --> 00:06:34.250

Isaiah: Right.

35

00:06:34.250 --> 00:06:36.350

Richard Hoehn: Work for you, or or.

36

00:06:36.350 --> 00:06:45.929

Isaiah: No, so I originally hold on. Let me let me share my screen real quick.

37

00:06:48.960 --> 00:06:50.549

Isaiah: Hold on! I can't see it.

38

00:06:53.330 --> 00:06:54.949

Richard Hoehn: Oh, allow. Okay. Sorry.

39

00:06:59.380 --> 00:07:00.460

Isaiah: Oh, you're good.

40

00:07:05.630 --> 00:07:08.539

Isaiah: So I originally looked at.

41

00:07:09.310 --> 00:07:16.820

Isaiah: I downloaded the shapefile, got that to run the mortgage data from here.

42

00:07:17.110 --> 00:07:18.489

Isaiah: I downloaded that.

43

00:07:20.060 --> 00:07:22.380

Isaiah: I got this data set and I'm running.

44

00:07:22.560 --> 00:07:28.809

Isaiah: It's this one that he never tells you where it comes from.

45

00:07:29.440 --> 00:07:33.699

Richard Hoehn: Yeah, so let me see. Did you see this.

46

00:07:34.140 --> 00:07:35.709

Isaiah: The one up at the top.

47

00:07:36.810 --> 00:07:43.229

Richard Hoehn: It's not essentially in the word document. I think.

48

00:07:45.310 --> 00:07:46.840

Isaiah: Mapping prejudice project?

49

00:07:48.030 --> 00:07:49.020

Isaiah: Or is it a different one?

50

00:07:49.020 --> 00:07:52.289

Richard Hoehn: Link actually from the word document here.

51

00:07:53.630 --> 00:07:56.340

Isaiah: Hmm! Could you put in the chat? I haven't seen the word document.

52

00:07:56.340 --> 00:08:02.810

Richard Hoehn: Is it? Is it? Is it like? Is it the Hmda data? Did you looking for.

53

00:08:03.380 --> 00:08:05.029

Isaiah: Hmm, yeah, I think so.

54

00:08:05.580 --> 00:08:09.959

Richard Hoehn: So is it? Maybe it's here.

55

00:08:17.770 --> 00:08:21.540

Richard Hoehn: is this the same link you were following? Yeah, yeah, it is. Okay.

56

00:08:21.740 --> 00:08:22.530

Richard Hoehn: Yeah.

57

00:08:22.910 --> 00:08:24.249

Isaiah: Yeah, I was looking at this one.

58

00:08:24.250 --> 00:08:29.209

Richard Hoehn: Yeah. And and I got a bunch of drop down. So I was looking at it on my phone.

59

00:08:30.700 --> 00:08:32.904

Richard Hoehn: And so that didn't quite work for you

60

00:08:34.159 --> 00:08:38.829

Isaiah: So or, well, that worked.

61

00:08:38.959 --> 00:08:43.219

Isaiah: It's I. I needed that data. It's just not all the data I need.

62

00:08:45.839 --> 00:08:47.139

Isaiah: If that makes sense.

63

00:08:50.639 --> 00:08:52.099

Isaiah: it's this.

64

00:08:55.208 --> 00:09:00.789

Isaiah: Yeah. So that's this mortgage data data frame that works. I downloaded that we need that

65

00:09:05.269 --> 00:09:08.659

Isaiah: it's the covenant data that has the issue.

66

00:09:10.149 --> 00:09:17.139

Isaiah: And I think that he's pulling it from this mapping prejudice project.

67

00:09:18.910 --> 00:09:25.499

Karson Woods: But if you download the file from mapping prejudice and look at it, it's totally different columns and everything.

68

00:09:27.370 --> 00:09:31.089

Isaiah: So my guess is maybe done some like manual renaming.

69

00:09:33.300 --> 00:09:34.350

Richard Hoehn: Okay.

70

00:09:34.350 --> 00:09:40.390

Isaiah: So I don't know if I don't hear anything on my discussion post by tomorrow I'll email him

71

00:09:41.560 --> 00:09:43.299

Isaiah: and just see what's going on.

72

00:09:43.880 --> 00:09:44.670

Richard Hoehn: Okay.

73

00:09:50.100 --> 00:09:54.329

Isaiah: Which is great. I thought I had everything set up and working, and then I was like, Oh, wait!

74

00:09:55.460 --> 00:09:56.990

Isaiah: I gotta track this down.

75

00:10:01.370 --> 00:10:10.529

Richard Hoehn: Did, did you? Were you able to download and kind of put it in the folder structure he was asking for? It's slightly different. He almost wants the data and the root

76

00:10:10.880 --> 00:10:12.010

Richard Hoehn: folder.

77

00:10:12.470 --> 00:10:14.160

Isaiah: Does he want data in the root folder? Now.

78

00:10:14.480 --> 00:10:16.470

Richard Hoehn: Didn't. Oh, no, wick it.

79

00:10:17.690 --> 00:10:21.410

Richard Hoehn: Oh, no, no, okay. It seems he wants additional data sets. Got it.

80

00:10:23.290 --> 00:10:26.460

Richard Hoehn: Oh, the data bias report Alcaqs, I see. Yeah.

81

00:10:26.800 --> 00:10:27.629

Isaiah: Yeah, yeah.

82

00:10:36.950 --> 00:10:40.610

Isaiah: So we'll see, we can get this tracked down.

83

00:10:44.800 --> 00:10:48.009

Richard Hoehn: So you think the next step is just giving, sending him an email.

84

00:10:49.089 --> 00:10:58.910

Isaiah: Yeah, just like it never says where this comes from. And it's not out on d, 2 l

85

00:10:59.340 --> 00:11:05.020

Isaiah: be there, so like, I don't know. I don't know what you're supposed to do with it.

86

00:11:06.940 --> 00:11:08.470

Isaiah: If you look

87

00:11:08.590 --> 00:11:14.650

Isaiah: out on d 12. Somebody else had the same question a few days ago, but they never got an answer.

88

00:11:19.440 --> 00:11:23.190

Isaiah: could maybe reach out to them, too, and see if they ever figured it out.

89

00:11:23.670 --> 00:11:27.405

Richard Hoehn: Oh, yeah, that might be a good idea. We know who made the

90

00:11:28.130 --> 00:11:30.240

Richard Hoehn: The post stuff.

91

00:11:31.300 --> 00:11:32.620

Isaiah: Yeah, I'll try that.

92

00:11:43.320 --> 00:11:45.230

Richard Hoehn: Abby Roberts, Right.

93

00:11:46.238 --> 00:11:47.469

Isaiah: Oh, no, we can't.

94

00:11:47.600 --> 00:11:50.700

Richard Hoehn: No, but she but John responded to him.

95

00:11:51.630 --> 00:11:54.930

Isaiah: Yeah, it's the the final comment on her post.

96

00:11:54.930 --> 00:11:57.500

Richard Hoehn: Yeah. Chances. Post here.

97

00:11:57.500 --> 00:12:02.439

Isaiah: Yeah. Might reach out to chance and see if he ever got that figured out.

98

00:12:08.690 --> 00:12:12.840

Isaiah: Yeah, cause it was his. It was his comment here originally. That pointed me back to the

99

00:12:13.040 --> 00:12:19.599

Isaiah: bias mapping project, or whatever which is referenced in the introduction to this project.

100

00:12:35.420 --> 00:12:39.440

Isaiah: So I'll see if anything bubbles up tonight, and if not, I'll send some emails tomorrow and.

101

00:12:39.440 --> 00:12:47.639

Richard Hoehn: Yeah, yeah, chance is really nice. I had a class. I had a class with him. He's pretty nice guy, and he's pretty responsive, too.

102

00:12:47.860 --> 00:12:48.560

Isaiah: Nice.

103

00:12:48.910 --> 00:12:50.709

Isaiah: Yeah, we'll try that and see.

104

00:12:58.350 --> 00:13:00.739

Isaiah: But yeah, that's that's been my fun.

105

00:13:02.370 --> 00:13:03.120

Richard Hoehn: Yeah.

106

00:13:10.150 --> 00:13:14.480

Isaiah: So what are y'all thinking about dividing up the work?

107

00:13:16.550 --> 00:13:23.619

Hector Rogel Jr.: I I'm about to submit what it it told me.

108

00:13:24.130 --> 00:13:27.610

Hector Rogel Jr.: Actually, yeah, you have her own issues.

109

00:13:28.430 --> 00:13:28.970

Richard Hoehn: Okay.

110

00:13:29.750 --> 00:13:31.969

Isaiah: Modern problems, require modern solutions.

111

00:13:33.940 --> 00:13:35.390

Hector Rogel Jr.: I, just post it right? Now.

112

00:13:36.260 --> 00:13:36.910

Isaiah: Alright.

113

00:14:04.760 --> 00:14:06.600

Isaiah: Yeah, that seems reasonable enough.

114

00:14:09.470 --> 00:14:14.850

Richard Hoehn: The only thing is certain, things are gated by others. Right? That's always tricky.

115

00:14:15.130 --> 00:14:18.349
Isaiah: Right like I'm relying on.

116
00:14:18.670 --> 00:14:23.350
Isaiah: If I was person 3, I'm relying on Person 2 to get their analysis done

117
00:14:25.680 --> 00:14:27.389
Isaiah: so that we can be consistent.

118
00:14:35.790 --> 00:14:39.989
Isaiah: but I like I. I like the general kind of structure of this, though.

119
00:14:57.010 --> 00:15:01.479
Richard Hoehn: Yeah. The good thing is, we've got another. What is it? Week and a day, I guess.

120
00:15:02.541 --> 00:15:03.899
Isaiah: I think it's a week.

121
00:15:04.140 --> 00:15:04.890
Karson Woods: You know it's.

122
00:15:04.890 --> 00:15:05.290
Richard Hoehn: Still we.

123
00:15:05.745 --> 00:15:06.200
Karson Woods: Night.

124
00:15:06.400 --> 00:15:07.620
Isaiah: Yeah. Let's do. Wednesday night.

125
00:15:08.040 --> 00:15:09.990
Richard Hoehn: Okay, yeah.

126
00:15:10.690 --> 00:15:18.349
Richard Hoehn: because I won't be able to get to too much today or tomorrow. But definitely going into this weekend is kind of my open

127

00:15:19.000 --> 00:15:21.610

Richard Hoehn: work work time on this.

128

00:15:22.790 --> 00:15:27.429

Richard Hoehn: I don't know how much you guys are gonna do on it, either. The next few days thing. So

129

00:15:27.780 --> 00:15:31.669

Richard Hoehn: just wanted to put that out.

130

00:15:40.850 --> 00:15:48.259

Richard Hoehn: how far do you think you are like? I guess we don't know if we have all the data yet, but we can do some of this work, Isaiah.

131

00:15:49.372 --> 00:15:54.509

Isaiah: So we should be able to do everything for what's the original county? Hennepin County.

132

00:15:54.510 --> 00:15:55.140

Richard Hoehn: Yeah.

133

00:15:55.140 --> 00:15:58.390

Isaiah: We should be able to do all of our analysis. We're independent

134

00:15:59.028 --> 00:16:01.060

Isaiah: with what we have right now.

135

00:16:01.720 --> 00:16:07.420

Isaiah: This is just for adding on the new Ramsey County data set.

136

00:16:10.170 --> 00:16:12.969

Isaiah: which I think that can kind of be added on anytime

137

00:16:13.090 --> 00:16:16.249

Isaiah: like, whenever I get it ready, we can just throw it in and do the same

138

00:16:16.777 --> 00:16:21.940

Isaiah: work that other people have worked on for Hannah Pen.

139

00:16:27.120 --> 00:16:36.039

Isaiah: It's like, I don't think we have to get this data set issues figured out right now to I don't think that's gonna block up progress on everything else.

140

00:16:44.220 --> 00:16:45.409

Richard Hoehn: Are you guys still there?

141

00:16:45.640 --> 00:16:46.680

Richard Hoehn: It's weird.

142

00:16:49.060 --> 00:16:49.899

Isaiah: Yeah, I'm here.

143

00:16:50.625 --> 00:17:01.170

Richard Hoehn: Like my zoom kind of as if it re logged itself in, was very strange. I can definitely start working Friday, probably evening on this stuff.

144

00:17:02.220 --> 00:17:05.610

Richard Hoehn: If you guys want me to even start working on person one.

145

00:17:06.170 --> 00:17:09.500

Richard Hoehn: I can do that or to analyze mortgage

146

00:17:10.010 --> 00:17:13.019

Richard Hoehn: one and 2 are they related.

147

00:17:15.629 --> 00:17:19.099

Karson Woods: Think when you turn away, because I've heard she can do that separately.

148

00:17:21.280 --> 00:17:23.279

Isaiah: What did you say, Carson? You can't cut out.

149

00:17:23.470 --> 00:17:29.219

Karson Woods: Oh, for like one and 2, I think they don't have to be done together. They can be kind of done separately. I feel.

150

00:17:32.340 --> 00:17:34.620

Isaiah: Yeah, they're kind of doing the same thing.

151

00:17:35.760 --> 00:17:36.480

Richard Hoehn: Yeah.

152

00:17:42.260 --> 00:17:45.610

Isaiah: Or well, not really person 2 is doing your algorithms

153

00:17:45.880 --> 00:17:48.309

Isaiah: or person. One is just looking at the data itself.

154

00:17:49.000 --> 00:17:49.980

Karson Woods: Yeah.

155

00:17:51.130 --> 00:17:53.269

Isaiah: It's like, I think they're kind of separate.

156

00:17:54.340 --> 00:18:01.740

Karson Woods: Kind of separate, but like, how should I say like, if I were doing person when I'd still be kind of writing some algorithms to figure it out.

157

00:18:02.670 --> 00:18:03.380

Isaiah: Right?

158

00:18:05.450 --> 00:18:09.389

Isaiah: Or well, if it's person one, you're doing data bias aren't you just looking at like

159

00:18:10.150 --> 00:18:17.699

Isaiah: kind of like what we did with our 1st project just looking for like inbound stuff like that.

160

00:18:24.630 --> 00:18:25.250

Richard Hoehn: Yeah.

161

00:18:32.097 --> 00:18:38.840

Isaiah: I was thinking about this earlier. What main algorithms do we want to try and target in our report

162

00:18:43.120 --> 00:18:47.140

Isaiah: because we need something that we can interpret fairly easily.

163

00:18:47.580 --> 00:18:49.800

Isaiah: so that we can figure out bias or whatever.

164

00:18:54.840 --> 00:19:09.040

Richard Hoehn: Like. I don't know exactly what. What are the columns? Is it as simple as we can kind of figure out about? You know race is more likely to get approved or not is is we're kind of going for that stuff right?

165

00:19:09.870 --> 00:19:10.689

Isaiah: I think so. Yeah.

166

00:19:10.690 --> 00:19:19.180

Richard Hoehn: Certain Caucasian, like Caucasian, gets approved easier with the same, or, you know, a lower salary, or something.

167

00:19:19.470 --> 00:19:20.070

Isaiah: Right.

168

00:19:21.890 --> 00:19:24.509

Isaiah: Like, we should be able to see that from the data fairly easily.

169

00:19:24.970 --> 00:19:34.459

Richard Hoehn: I mean, we can always 1st pick off. I mean, I'm always fine with picking up the picking off the easy stuff first, st you know, and then morphing into the hard stuff.

170

00:19:35.160 --> 00:19:37.349

Richard Hoehn: if if that's available

171

00:19:37.510 --> 00:19:44.670

Richard Hoehn: there, did you guys do the other data classes? See? I did that. What it was a data, 6,

172

00:19:44.920 --> 00:19:51.749

Richard Hoehn: 60, 30, or stuff. I think one of those data classes had that had a similar.

173

00:19:52.410 --> 00:19:53.340

Isaiah: Oh!

174

00:19:53.340 --> 00:19:54.300

Richard Hoehn: You guys do those.

175

00:19:55.990 --> 00:19:59.989

Isaiah: What was was it in? Was it those half semester classes.

176

00:20:00.250 --> 00:20:01.159

Richard Hoehn: Yeah, yeah.

177

00:20:01.160 --> 00:20:02.380

Isaiah: Yeah, those.

178

00:20:03.324 --> 00:20:06.579

Isaiah: I haven't taken 63, 30 yet.

179

00:20:06.580 --> 00:20:14.290

Richard Hoehn: Squabbling, maybe. Was it one of those that was crime rate.

180

00:20:15.100 --> 00:20:16.540

Isaiah: Oh, yeah, we just. I just finished that.

181

00:20:17.150 --> 00:20:18.179

Hector Rogel Jr.: So did I.

182

00:20:19.030 --> 00:20:20.840

Richard Hoehn: Are you guys in 63, 20.

183

00:20:21.660 --> 00:20:22.550

Hector Rogel Jr.: Vanished.

184

00:20:22.750 --> 00:20:31.079

Richard Hoehn: Okay? Well, actually, okay, yeah, I'm I'm looking at my homeworks here. I think this is all this canting.

185

00:20:31.852 --> 00:20:34.590

Richard Hoehn: So maybe let me see if it was.

186

00:20:36.340 --> 00:20:37.300

Hector Rogel Jr.: That was a lot.

187

00:20:38.490 --> 00:20:47.169

Richard Hoehn: Yeah, yeah, okay, so 63, 30. In that case, let me see if I can find it there.

188

00:21:13.350 --> 00:21:17.929

Richard Hoehn: What's that I did? Or did we do it on a data dive or something?

189

00:21:18.620 --> 00:21:26.140

Richard Hoehn: You know we did some of this work already before in one of these classes, not with this data set. But you know.

190

00:21:26.320 --> 00:21:27.270

Isaiah: The idea.

191

00:21:27.270 --> 00:21:31.360

Richard Hoehn: Close to it, cool.

192

00:21:31.360 --> 00:21:35.669

Isaiah: I mean, I know that in 63, 20 we did a lot of like classification, modeling and stuff.

193

00:21:36.890 --> 00:21:38.220

Hector Rogel Jr.: Classification.

194

00:21:38.508 --> 00:21:40.819

Isaiah: Yeah, with like decision trees. And all that.

195

00:21:41.910 --> 00:21:44.449

Isaiah: I was kind of thinking, we could maybe just run like a

196

00:21:44.900 --> 00:21:48.330

Isaiah: simple decision tree model and like a logistic regression model.

197

00:21:49.720 --> 00:21:53.379

Isaiah: because those are going to be the easiest to look at and figure out our bias.

198

00:21:56.170 --> 00:22:02.460

Isaiah: Because if it's something as blatant as like race decreases your

199

00:22:03.080 --> 00:22:06.890

Isaiah: chances of getting approved. Then it should show up pretty quickly. There.

200

00:22:20.360 --> 00:22:26.899

Hector Rogel Jr.: Yeah. So in in 63, 20, you're gonna do an Airbnb data dive for. That's what I did inside.

201

00:22:26.900 --> 00:22:28.200

Hector Rogel Jr.: And Airbnb.

202

00:22:30.120 --> 00:22:30.989

Isaiah: That was fun!

203

00:22:33.120 --> 00:22:36.890

Karson Woods: I don't think I did that, and I took it like 2 and a half years ago.

204

00:22:39.100 --> 00:22:40.970

Richard Hoehn: You've been here forever, haven't you?

205

00:22:41.360 --> 00:22:44.690

Richard Hoehn: Well, I took a year off old car Sedan.

206

00:22:45.420 --> 00:22:45.960

Karson Woods: What?

207

00:22:46.230 --> 00:22:49.789

Richard Hoehn: That's just like, because 2 years is a long time kind of thing.

208

00:22:49.930 --> 00:22:52.400

Karson Woods: It is. Well, I took a year off, so it's like.

209

00:22:53.950 --> 00:22:54.590

Isaiah: Fence.

210

00:22:54.920 --> 00:22:55.440

Karson Woods: Yeah.

211

00:23:01.350 --> 00:23:05.769

Isaiah: Yeah, I think we should be able to leverage something similar to the 63 20 work, though

212

00:23:06.430 --> 00:23:07.890

Isaiah: I'm sure we can find it.

213

00:23:07.890 --> 00:23:09.309

Richard Hoehn: Somewhere in our folders. Yeah.

214

00:23:10.000 --> 00:23:15.639

Karson Woods: We can also do some sort of data 6,500. So I think there's like a classification one that we did for it.

215

00:23:18.670 --> 00:23:20.219

Hector Rogel Jr.: I'm not taking that class yet.

216

00:23:21.020 --> 00:23:22.229

Karson Woods: Oh, really! Oh! It took a while.

217

00:23:22.230 --> 00:23:22.650

Hector Rogel Jr.: No.

218

00:23:22.650 --> 00:23:25.029

Karson Woods: So have you taken a Richard.

219

00:23:25.210 --> 00:23:26.239

Richard Hoehn: Let me see.

220

00:23:34.700 --> 00:23:39.720

Richard Hoehn: Oh, okay, I I have taken it. Yeah, let me see, it's a.

221

00:23:39.720 --> 00:23:44.410

Karson Woods: There's 1 for classification analysis. We could maybe. Well, I don't know how easy it would be, but

222

00:23:45.150 --> 00:23:47.459

Karson Woods: it could maybe do something like that.

223

00:23:48.140 --> 00:23:53.109

Richard Hoehn: Did you take it last semester? I think this is the one I just took him fall 24, actually.

224

00:23:53.110 --> 00:23:54.789

Karson Woods: Yeah, I took it last semester.

225

00:23:55.150 --> 00:23:57.150

Richard Hoehn: You and me were in class together. Huh?

226

00:23:57.150 --> 00:24:00.820

Karson Woods: Oh, really. Oh, yeah. Remember your site up front. I saw in the back.

227

00:24:00.820 --> 00:24:03.519

Richard Hoehn: Yeah, yeah, yeah. I said from with, nor.

228

00:24:04.220 --> 00:24:05.020

Karson Woods: Yeah.

229

00:24:06.870 --> 00:24:10.739

Richard Hoehn: Oh, no, let me see, I can't find what she had us

230

00:24:10.860 --> 00:24:13.269

Richard Hoehn: do on on some of that.

231

00:24:15.590 --> 00:24:19.450

Richard Hoehn: That wasn't, I should say. Wasn't my favorite.

232

00:24:22.300 --> 00:24:22.870

Richard Hoehn: Yeah.

233

00:24:22.870 --> 00:24:25.500

Isaiah: You're making me feel real great. I gotta take that next semester.

234

00:24:26.110 --> 00:24:34.539

Richard Hoehn: It was. I mean, it was actually kind of easyish, you know. It was a little rough, I mean, it was an evening class, right, Carson, and it.

235

00:24:34.540 --> 00:24:36.240

Karson Woods: Yeah, it was in the evening class.

236

00:24:36.240 --> 00:24:37.930

Richard Hoehn: I mean she didn't.

237

00:24:38.890 --> 00:24:43.399

Richard Hoehn: It was sometimes tough to stay, you know. Focused kind of thing.

238

00:24:43.400 --> 00:24:46.860

Karson Woods: She just kind of what then? She was a new professor, so like.

239

00:24:47.270 --> 00:24:50.320

Karson Woods: I guess. Give her some slack, but she just kind of like food.

240

00:24:50.520 --> 00:24:51.940

Richard Hoehn: Yeah, yeah.

241

00:24:52.600 --> 00:24:53.259

Isaiah: Fair enough.

242

00:24:53.530 --> 00:24:56.639

Richard Hoehn: And it was, you know, from 6 to what was it? 6 to.

243

00:24:56.850 --> 00:24:57.990

Karson Woods: 6 to 9.

244

00:24:57.990 --> 00:25:01.850

Richard Hoehn: Like, you know, hey? It gets, you know, and like it's like.

245

00:25:01.980 --> 00:25:05.689

Richard Hoehn: you know. And she said, You now do it in py fall like in, you know.

246

00:25:06.100 --> 00:25:16.960

Richard Hoehn: I'm not good at kind of coding on the fly, you know. I'm not a good, you know. Hackathon kind of coder. So you know it wasn't, you know, super great for me. Kind of thing.

247

00:25:17.160 --> 00:25:22.081

Richard Hoehn: but it was. It was a fine class. It was an easy class. I got good grades in it.

248

00:25:23.250 --> 00:25:23.940

Isaiah: Fair enough.

249

00:25:30.190 --> 00:25:47.279

Richard Hoehn: I. So I'm fine with taking a stab person. One person, 2. I feel like they're kind of intertwined a little bit, but they can kind of operate independently. Person. One is still gonna do algorithmic stuff to to make a decision, you know, like to look at it.

I feel.

250

00:25:47.710 --> 00:25:48.640

Isaiah: Right.

251

00:25:51.230 --> 00:25:52.509

Richard Hoehn: You know I can.

252

00:25:53.420 --> 00:26:04.069

Richard Hoehn: You know, if this is what we want to say is just kind of our outline to how we go about this date and kind of check it off our list. You know that I'd be fine with that. You know these.

253

00:26:05.530 --> 00:26:08.920

Richard Hoehn: I've yeah, it's okay.

254

00:26:08.920 --> 00:26:14.280

Richard Hoehn: If you guys want to just divvy it up to 1, 2, 3, 4, you know. Person 1, 2, 3, 4. I mean.

255

00:26:14.510 --> 00:26:20.980

Richard Hoehn: be fine with that, too. I think there's gonna be some overlap and some no

256

00:26:21.510 --> 00:26:24.760

Richard Hoehn: working together again. It it seems.

257

00:26:25.240 --> 00:26:28.279

Isaiah: Yeah. But I think that works well, as like a just like a general outline.

258

00:26:33.420 --> 00:26:38.099

Isaiah: Yeah. So I'll take which one is it? Person 3.

259

00:26:39.600 --> 00:26:41.489

Isaiah: Yeah, I've already kind of started on that.

260

00:26:43.570 --> 00:26:45.079

Richard Hoehn: And let me see, I won't make a list.

261

00:26:47.210 --> 00:26:50.870

Hector Rogel Jr.: Wait, so is the presentation. 5 min or 15 min.

262

00:26:51.390 --> 00:26:52.320

Isaiah: It's 5.

263

00:26:52.580 --> 00:26:57.240

Isaiah: I asked him in class last week, and he said, It's only 5.

264

00:26:57.630 --> 00:26:59.609

Hector Rogel Jr.: Okay, so it's just making sure.

265

00:27:00.431 --> 00:27:04.460

Isaiah: I saw that, too, and I'm like I do not want to present for 15 min.

266

00:27:04.460 --> 00:27:05.240

Hector Rogel Jr.: Yeah.

267

00:27:25.100 --> 00:27:28.710

Richard Hoehn: Okay. So I've got person one Richard person 3. Isaiah.

268

00:27:41.050 --> 00:27:46.819

Richard Hoehn: Parson Hector, any any thoughts or or I can also give up mine. That's no problem, too.

269

00:27:49.790 --> 00:27:54.100

Karson Woods: I'm fine with either long we'll leave it up to him.

270

00:27:55.070 --> 00:27:56.850

Hector Rogel Jr.: I don't mind which one I get either.

271

00:28:01.360 --> 00:28:03.179

Karson Woods: I guess I can do it too.

272

00:28:04.540 --> 00:28:07.890

Hector Rogel Jr.: Alright, so I guess that leaves me with 4.

273

00:28:14.120 --> 00:28:19.299

Richard Hoehn: And again, we can kind of, you know, work on it, see where we get, and all that, and.

274

00:28:20.510 --> 00:28:21.620

Isaiah: Yeah, yeah.

275

00:28:25.200 --> 00:28:27.260

Richard Hoehn: So I just posted something like this.

276

00:28:34.790 --> 00:28:43.930

Richard Hoehn: do we? Wanna maybe regroup I've got class on Tuesday again. But I could meet

277

00:28:44.320 --> 00:28:46.990

Richard Hoehn: 5 30 before class.

278

00:28:49.460 --> 00:28:50.200

Richard Hoehn: Or

279

00:28:51.750 --> 00:28:57.089

Richard Hoehn: after class is kind of tough, but class till 8, and then I kind of want to get home.

280

00:28:57.450 --> 00:28:58.570

Isaiah: I understand.

281

00:28:59.640 --> 00:29:07.190

Richard Hoehn: Or or we could do Monday, too. We could say, Okay, let's see where we are on Monday, you know, just to have a touch point. If you guys would like.

282

00:29:08.180 --> 00:29:08.950

Isaiah: Yeah, I'm fine with that.

283

00:29:08.950 --> 00:29:13.070

Richard Hoehn: Wednesday seems a little late to me. Kind of thing, unless we or we

284

00:29:13.070 --> 00:29:22.130

Richard Hoehn: say, Hey, Wednesday, we're going to power through it all together, you know, with 8 o'clock at night again until we submit. You know we can do.

285

00:29:22.730 --> 00:29:26.440

Isaiah: I'd rather do it earlier rather than later. But that's just me.

286

00:29:27.250 --> 00:29:29.840

Karson Woods: No, I definitely agree, like doing it earlier would work better.

287

00:29:29.840 --> 00:29:30.590

Hector Rogel Jr.: Earlier.

288

00:29:31.000 --> 00:29:31.770

Richard Hoehn: Okay.

289

00:29:31.920 --> 00:29:34.310

Richard Hoehn: Any let me speak.

290

00:29:35.490 --> 00:29:42.190

Karson Woods: If we do Monday, I'd have to probably do it later. On Tuesday, like 5 30 subclash from 6 to 9 on Tuesday.

291

00:29:55.060 --> 00:30:05.329

Richard Hoehn: I'm I'm fine either Monday evening is fine. That's no problem. Or then, you know, 5, 30, or 5, even on Tuesday would work

292

00:30:05.830 --> 00:30:06.680

Richard Hoehn: for me.

293

00:30:07.760 --> 00:30:10.569

Isaiah: Let's do 5 30 again. That worked well last week.

294

00:30:11.040 --> 00:30:17.250

Richard Hoehn: Just power through it half an hour, and then we can

always say, Okay, well, we'll get together.

295

00:30:19.240 --> 00:30:19.710

Richard Hoehn: Yeah.

296

00:30:19.710 --> 00:30:20.350

Isaiah: Need another, one.

297

00:30:20.350 --> 00:30:29.050

Richard Hoehn: Kind of thing. Okay? So I'm gonna I'm gonna put this in my zoom. Here, are you assuming?

298

00:30:29.160 --> 00:30:38.669

Richard Hoehn: Okay, I I need to. I'll I'll I'll add it and send you guys the links and all that. Once we log off, I'm not sure I know how to

299

00:30:38.880 --> 00:30:42.519

Richard Hoehn: schedule another meeting while we're on the meeting.

300

00:30:46.350 --> 00:30:50.980

Richard Hoehn: Oh, here schedule meeting, let's see. So

301

00:30:54.060 --> 00:31:04.280

Richard Hoehn: we're talking Tuesday, the 18, th at by 30 to 6 central time.

302

00:31:08.280 --> 00:31:10.949

Richard Hoehn: So can I just put the link in the

303

00:31:12.030 --> 00:31:18.309

Richard Hoehn: in the chat again. Kind of thing. Or do you get? Do you want to send me your email addresses? And I can add them.

304

00:31:19.790 --> 00:31:21.900

Isaiah: I'm just putting it in. The repo is fine. I think.

305

00:31:22.450 --> 00:31:23.080

Karson Woods: Yeah.

306

00:31:23.700 --> 00:31:24.340

Richard Hoehn: Right.

307

00:31:25.090 --> 00:31:25.594

Richard Hoehn: Oh,

308

00:31:27.250 --> 00:31:29.039

Richard Hoehn: And we'll just do this

309

00:31:41.230 --> 00:31:42.140

Richard Hoehn: this.

310

00:32:17.520 --> 00:32:19.869

Isaiah: Thank you for getting that set up for us, Richard.

311

00:32:20.170 --> 00:32:23.729

Richard Hoehn: No problem. I'm just looking. It doesn't really see when it's gonna be

312

00:32:32.950 --> 00:32:36.129

Richard Hoehn: right. Here's the login info.

313

00:32:37.580 --> 00:32:41.330

Richard Hoehn: Let me see. I guess I should be in details.

314

00:32:42.210 --> 00:32:43.310

Richard Hoehn: 2.

315

00:32:52.950 --> 00:32:53.790

Richard Hoehn: Here we are.

316

00:32:54.150 --> 00:32:54.870

Richard Hoehn: Okay.

317

00:32:57.830 --> 00:32:58.625

Richard Hoehn: Alright.

318

00:33:02.570 --> 00:33:12.360

Richard Hoehn: So let's see where we are on Tuesday, hopefully. So was it, I see, or Hector that created the the word document? Have we built that yet?

319

00:33:13.456 --> 00:33:15.239

Isaiah: I think I created it.

320

00:33:16.630 --> 00:33:19.090

Isaiah: But that's been a while. Let me check real quick.

321

00:33:20.430 --> 00:33:21.390

Karson Woods: Doesn't look like it.

322

00:33:21.390 --> 00:33:22.939

Richard Hoehn: Oh, yeah, here it is. Nice.

323

00:33:23.070 --> 00:33:23.760

Hector Rogel Jr.: And then.

324

00:33:27.070 --> 00:33:29.419

Richard Hoehn: Oh, yeah, cool. Got it? Yeah.

325

00:33:35.030 --> 00:33:36.819

Isaiah: Yes, we got that working

326

00:33:45.610 --> 00:33:47.269

Isaiah: alright. Well, that sounds good, guys.

327

00:33:47.705 --> 00:33:48.139

Richard Hoehn: Well.

328

00:33:48.490 --> 00:34:01.430

Richard Hoehn: thanks, everybody. I'll upload the usual, the summaries and all that kind of stuff, and pdf them up soon as I get them. It takes. Usually it takes a few hours. And then suddenly, I get an email that did all it all of it.

329

00:34:02.310 --> 00:34:05.060

Isaiah: All right. Okay. Y'all enjoy the rest of y'all's break.

330

00:34:05.810 --> 00:34:07.920

Richard Hoehn: Okay, take care. Bye, guys.

331

00:34:07.920 --> 00:34:08.629

Karson Woods: Alright, bye! See you.
