Meeting summary for Richard Hoehn's Zoom Meeting (03/08/2025)

Quick recap

Richard and Isaiah discussed their project deliverables, including data bias examination and downloading new county data. They then explored Richard's academic and professional background, including his current work on route optimization algorithms for rural logistics. The team concluded by planning their upcoming meeting and agreeing to review materials beforehand to efficiently divide the workload for their project.

Next steps

- Isaiah to download and process Ramsey County data next week.
- All team members to thoroughly read through project requirements and examine code/data before next meeting.
- Richard to send out Zoom invite for next meeting on Wednesday, March 12th at 7 PM.
- Richard to upload meeting transcript after receiving it via email.
- Richard to follow up with professor on Monday regarding grade update for previous assignment.

Summary

Discussing Deliverables and Data Extension

In the meeting, Richard and Isaiah discussed their upcoming deliverables for their project. Isaiah explained that they need to examine bias in the data, identify any algorithmic bias, and download data for Ramsey County instead of the original data provided. Richard shared that a CSV file was already added to their Github repo. They also discussed a grade issue, with Richard deciding to follow up with the instructor. They ended the conversation by discussing the potential ease of extending their current notebook for the new county data.

Data Science Class and Richard's Ventures

Richard discusses his evening class on Data Science, which has only four students. He compares it to other classes, noting that it's easier than his ethics and statistics classes but requires more participation due to the small size. Richard also mentions his background, including graduate work at Vanderbilt in business and computer engineering.

at MTSU. He shares his professional experience in product management, including founding and selling a logistics software company. Currently, Richard is working on a new venture called Ayrton, funded by a venture capital company. The conversation also touches on other courses, with Isaiah and Richard discussing their experiences with Dr. Phillips' challenging but rewarding AI and Deep Learning classes.

Drone Logistics Route Optimization Algorithms

Richard discussed his work on algorithms for route optimization in rural logistics, particularly in agriculture. He explained how drones can be used to spray fields more efficiently, and how the weight of the truck and the need for washouts can affect the optimal route. Richard also shared his current project, which involves solving the Traveling Salesman Problem with multiple dimensions, such as distance, weight, and pick-up/drop-off locations. He mentioned his use of Node.js and TypeScript for this project. The team showed interest in Richard's work, and he expressed his goal to improve the performance of the algorithms.

Spring Break and Project Meeting Plans

The group discusses their upcoming spring break plans and schedules a meeting for Wednesday at 7 PM to discuss their project. They agree to review the materials and code before the meeting to facilitate dividing up the work. Richard mentions he will upload the transcript and send out a meeting invite. The team plans to work on the Ramsey County data analysis alongside their current project to ensure timely completion of both tasks.
